

Earth is the only planet in the universe where life is possible. It provides water and oxygen for living. We can protect the Earth by protecting its natural resources and the environment. It is at the right distance from the Sun, It is protected from harmful solar radiation by its magnetic field.

When the solar system settled into its current layout about 4.5 billion years ago, Earth formed when gravity pulled swirling gas and dust in to become the third planet from the sun. Like its fellow terrestrial planets, Earth has a central core, A rocky mantle, and a solid crust but according to Hindu mythology, A Lotus grew from Lord Vishnu's navel with Brahma sitting on it. Brahma separated the flower into 3 parts - The Heavens, The Earth, and The Sky. Out of loneliness, Brahma split himself into two to create a male and a female. From this male and female, all beings were created. So, The answer to the question - Who created the world in Hinduism? is Brahma is the creator, from whom the universe and the four Vedas emerge.

According to the estimate, 4 billion years from now, The increase in Earth's surface temperature will cause a runaway greenhouse effect, creating conditions more extreme than present-day. By that point all life on Earth will come to an end. If we continue wasting

natural resources just like today, At some point we'll regret it. Saving the environment is our duty. So, let's prepare ourselves for saving our mother earth.

The first and the best way is to RECYCLE. Store food in usable containers. Stop littering. Save electricity, Water. The main things that are harming our mother earth are - overpopulation, pollution, burning fossil fuels, and deforestation changes like these have triggered climate change, soil erosion, poor air quality, and undrinkable water.

THANK YOU EVERYONE
